## NTC

## NTC THERMISTOR SPECIFICATION

TYPE: MF5A-3

## 1, GENERAL

This specification defines characteristics, dimension and main condition of the NTC thermistor SJMF5A-3.

2, THERMISTOR CHARACTERISTICS

| Item | Sign. | Char. |  |  |  |  |  |  |  |  |  |  | Unit | Tol. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & 2.1 \\ & \text { Resistance } \end{aligned}$ | R25 ${ }^{\circ} \mathrm{C}$ | 1 | 2.2 | 3.3 | 4.7 | 6.8 | 10 | 22 | 47 | 68 | 100 | 470 | K $\Omega$ | 5\% |
| $\begin{aligned} & 2.2 \\ & B \text {-value } \end{aligned}$ | B25/50 | 3270 | 3400 | 3470 | 3470 | 3950 | 3950 | 3950 | 3990 | 3950 | 3950 | 4380 | K | 2\% |
| 2.3 Thermal time constant | $\tau$ | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 10 | 10 | s e c | Max |
| 2.4 <br> Dissipationonstant | $\delta$ | 2.1 | 2.1 | 2.1 | 2.1 | 2.1 | 2.1 | 2.1 | 2.1 | 2.1 | 2.1 | 2.1 | $\mathrm{mW} /{ }^{\circ} \mathrm{C}$ | min |

3, 3.1 Operating temp. (Tw): $-30 \sim 100^{\circ} \mathrm{C}$
3.2 Maximum current (I max): 1.0 mA
3.3 Maximum power (P max): 5mW
4.

Shape and dimension

| NO. | Specific ation \& material |
| :---: | :--- |
| 1. | Chip themistor |
| 2. | Epoxy resin |
| 3. | $\phi 0.4 \mathrm{CP} / \mathrm{Sn}$ Wire |
|  |  |

6, Reliability characteristics test
6. 1 temp. cycle(in air)
$-30^{\circ} \mathrm{C} \times 5 \mathrm{~min}=25^{\circ} \mathrm{C}+100^{\circ} \mathrm{C} \times 5 \mathrm{~min} \quad 500 \mathrm{cycles}$ $\triangle R / R \leqslant 2 \%$
6. 2 High temp. test
placed for 1000 hours, at $100^{\circ} \mathrm{C}$ (in air)
$\triangle R / R \leqslant 2 \%$
6. 3 Low temp. test placed for 1000 hours, at $-30^{\circ} \mathrm{C}$ (in air) $\triangle R / R \leqslant 2 \%$
6. 4 High temp. humidity test $40^{\circ} \mathrm{C}-95 \%$ R.H., placed r 1000 hours. $\triangle R / R \leqslant 2 \%$
6.5 Transfer test
$1.0 \mathrm{~mA} \times 40$ days.
$\triangle R / R \leqslant 2 \%$

7, Control the air temperature blowed the thermistor head to Max. $250^{\circ} \mathrm{C}$ when adding a hea shrink potecting tube . And the outlet of hot air bower should be of sone distance to the themistor lest excessively heated Over hea shock will cause resistance value drift.
